

3D LABOR

LABOR INTELLIGENCE PLATFORM

User Guide

Everything in the app, explained the easy way.

What is this app?

This app is like a **stopwatch for work**. When you install devices or pull cable, the app times how long it takes. Then it remembers everything — forever.

Why? Because when the company knows how long work *really* takes, it can plan better jobs, send the right number of people, and win more work. **Every time you use it, the company gets smarter.**

It is **not** a timecard. It does not track your breaks or your day. It only times the task you tell it to time.

Put the app on your phone

- 1 Open **3dtsi-lip.pages.dev** in your phone's browser (Safari on iPhone, Chrome on Android).
- 2 On iPhone: tap the **Share** button (the square with the arrow), then **Add to Home Screen**. On Android: tap the **:** menu, then **Add to Home screen**.
- 3 Done! Now there's a **3D LABOR** icon on your phone, just like a regular app.

Make an account and sign in

- 1 On the sign-in screen, tap **Create account (3DTSI staff)**.
- 2 Type your name, your **work email** (it must end with **@3dtsi.com**), and a password with at least 10 characters.
- 3 If the app asks for a code, check your email for a **6-digit code** and type it in. That proves the email is really yours.
- 4 Now sign in with your email and password. That's it!

Forgot your password? Tap **Forgot password?** on the sign-in screen and we'll email you a code to set a new one.

Pick your project

- 1 Find your project in the list, or type part of its name in the search box.
- 2 Even faster: tap  **Scan QR** and point your camera at the project's QR code (your PM can print one). The app jumps straight to the right project.
- 3 Tap the project. Now you're ready to track work.

Track installing devices (cameras, readers, strobes...)

- 1 Tap **Device Installation**.
- 2 Pick the **System** (like Fire Alarm) and the **Device** (like Horn Strobe).
- 3 Set how many people are working with the **- and +** buttons. If you want, pick their names too (optional).
- 4 Tap the big **▶ START** button. The timer starts running.
- 5 Go do the work! Going to lunch? Tap **|| Pause**, then **▶ Resume** when you're back. Paused time does not count.
- 6 All done? Tap **■ Stop** and type **how many devices you installed** (like 47). Tap Complete.

The app instantly shows your numbers — like how many devices per hour your crew did. **That result is saved forever** and helps the company estimate the next job.

Track pulling cable

- 1 Tap **Cable Installation**.
- 2 Pick the **cable type** (like Cat6A).
- 3 For every reel (spool) you'll use, tap **+ Add reel** and type how many feet are on it when you start (usually 1000). You can have up to **30 reels**.
- 4 Set your crew size, then tap ► **START**.
- 5 Pull cable! Pause for lunch if you need to.
- 6 When you stop, the app asks how many feet are **left on each reel**. Look at the reel marks and type it in. The app does the math: started with 1000, have 420 left = **you pulled 580 feet**. No calculator needed!

Closed the app by accident? No problem

The timer lives on the server, not on your phone. If your phone dies or you close the app, **your timer keeps running**. Open the app again, go to 🕒 **My Work**, and tap your session to get right back to it.

See your work history

Tap **My Work** in the menu. The top shows anything still running. Below that is everything you've finished — with your speed numbers for each one. Try to beat your best!

Keep your account safe

Tap **your name** (bottom of the menu on a computer, top right on a phone) to open your account page. There you can:

- **Change your password** — type your old one, then the new one.
- **Turn on MFA** — scan a QR code with an authenticator app. After that, signing in also asks for a 6-digit code from your phone. It's like a second lock on your door.
- See every time someone signed in to your account, and from where.

For Project Managers: create projects

Secret door: the Administration area isn't in the menu. To open it, **click the logo 7 times quickly** (the little logo at the top of the screen). Then pick the **Projects** tab. There are two easy ways:

- 1 **The Excel form:** tap **↓ Download Project Form**, fill out the Answer column in Excel (project number, name, customer, systems...), save it, then tap **↑ Upload Project** and pick your file. The project is created instantly with a QR code.
- 2 **Type it in:** use the "New project" boxes on the same page.

The systems you list on the form are the only ones technicians will see on that project — fewer wrong choices in the field. Print the QR code (tap **QR** next to the project) and tape it up in the job trailer.

What do the numbers mean?

- **Man hours** = clock time × people. Two people working 3 hours = 6 man hours.
- **Earned hours** = what the work *should* have taken according to our estimates.
- **Productivity** = earned ÷ spent. **Over 100% is winning** — the crew beat the estimate. Under 100% means the work took longer than planned.
- **Confidence** on Intelligence pages = how much data we have. More completed sessions = more trustworthy numbers.

For Admins: run the platform

Secret door: **click the logo 7 times quickly** to open the Administration area.

- **Admin → Users:** add people, disable accounts, see who has MFA on. Self-registered staff start as Technicians — promote them here.
- **Admin → Roles:** tick or untick what each role is allowed to do.
- **Admin → Catalog:** add new systems and devices, and set the estimate hours per unit — that number is what crews are measured against.
- **Admin → Projects:** the  button deletes a project. If it already has recorded work, it's archived instead (hidden from the field, history kept).

Something's not working?

- App looks old or weird? **Close it all the way and open it again** — it updates itself.
- Can't sign in? Use **Forgot password?** on the sign-in screen.
- Camera won't scan? Just search for the project by name instead.
- Still stuck? Ask your PM or an admin.
